john.smith@email.com | +1-415-555-0101 | San Francisco, CA | github.com/jsmith-dev

---

## Summary

Senior Backend Engineer with 7 years of experience building high-throughput Python services and REST APIs. Deep expertise in FastAPI, PostgreSQL, and distributed systems. Led backend teams at two YC-backed startups. Passionate about clean architecture and developer tooling.

---

## Technical Skills

- Languages: Python (expert), Go (proficient), SQL, Bash
  - Frameworks: FastAPI, Django, SQLAlchemy, Celery, pytest
  - Databases: PostgreSQL, Redis, MongoDB, Elasticsearch
  - DevOps: Docker, Kubernetes, GitHub Actions, AWS (EC2, RDS, S3, Lambda)
  - ML/AI: PyTorch (basic), Hugging Face Transformers, LangChain, RAG pipelines
- 

## Work Experience

### Senior Backend Engineer — DataStream Inc., San Francisco (Jan 2021 – Present)

- Architected FastAPI microservices handling 50,000 req/s with <30 ms p99 latency using async Python + Postgres.
- Designed real-time event pipeline using Kafka + Celery processing 2 million events/day.
- Reduced API response times 40% through query optimisation and Redis caching layer.
- Mentored 4 junior engineers; led bi-weekly architecture review sessions.

### Backend Engineer — HireAI (YC W19), San Francisco (Mar 2018 – Dec 2020)

- Built resume parsing pipeline (FastAPI + SpaCy) processing 10,000 CVs/day.
  - Implemented full-text search with Elasticsearch; improved candidate match recall by 25%.
  - Designed PostgreSQL schema for multi-tenant SaaS with row-level security (RLS).
- 

## Education

B.Sc. Computer Science — UC Berkeley (2017) | GPA: 3.8/4.0

---

## Certifications

- AWS Certified Solutions Architect — Associate, 2022
- Certified Kubernetes Application Developer (CKAD) — CNCF, 2021
